Syllabus of Ph.D. Admission Test

Section-A

Multiple Choice Questions

Part I- Multiple Choice Questions on Research Methodology (40 Marks)

Writing Skills: Tenses, parts of speech, clauses, subject verb agreement, idioms and phrases, reading comprehension, synonyms-antonyms, hyponyms.

Mathematics and Statistics; Algebra, ordinary differential equations (ODE), numerical analysis, real and complex analysis, vector analysis, measure of central tendency, probability distribution function, deviation, standard deviation, and variance.

Research Formulation; Defining and formulating the research problem, Selecting the problem, Importance of Literature Review in defining a problem, Literature Review: Primary and secondary sources.

Part II- Multiple Choice Questions on Subject (10 Marks)

Section-B

Subjective Questions (30 Marks)

Food Engineering-I: Dry and wet grinding, size reduction equipment, size measurement and analysis, standard sieves, Membrane separation processes, Fluidization Characteristics, liquid solid fluidization, minimum fluidization, voidage and minimum fluidization velocity, filtration and washing filter aids filter media, classification of filtration, Design of filtration equipment, Mixing and Agitation, Mixing phenomena, Flow pattern and impellers, vortex formation and prevention, Mixing equipment, Centrifugation, Material balance, Energy balance, kinetics of chemical reactions in foods.

Livestock and Aquaculture Food Products Processing: Status of meat industries, export oriented and integrated plants, municipal slaughter houses vs. modern slaughter house Meat composition, its nutritive aspect, meat production, animal and poultry slaughtering, post-mortem changes, physicochemical changes,
Syllabus of Ph.D. Admission Test

Refrigeration Engineering: Types of thermodynamic systems, energy interactions, First law of thermodynamics for closed and open systems, Second law of thermodynamics, Kelvin-Planck and Clausius' statements, Carnot cycle, Carnot theorem, Reversed Carnot cycle- ideal heat pump and refrigerator, Reverse Carnot cycle for a gas and vapour as working substances, Properties of pure substances and their representation on various property diagrams-pv, Ts, ph, hs diagrams, Refrigerants-nomenclature and properties, Vapour-compression refrigeration cycle: definition of terms, simple and actual cycle with liquid refrigerant sub-cooling, vapour refrigerant superheating. Compound compression refrigeration system with inter-cooling, flash gas removal. Multi-evaporator systems, Vapour absorption refrigeration system: aqua ammonia system, Hunter-Platen system, Gas cycle, refrigeration: Bell Coleman cycle, Steam-jet refrigeration, Psychrometrics: definition of terms, psychrometric chart, psychrometric processes, Cold preservation of foods: freezing techniques- air freezing, contact freezing, immersion freezing.

Food Quality standards and Regulations: Examination of canned food products, FAO/WHO Codex Alimentarius Commission standard of canned pine apple, particulars of specifications, essential composition, allowances and defects, standards and analysis of water, Sensory evaluation- methods, Difference, Rating Sensitivity tests, and interpretation of results, requirements for sensory evaluation e.g. Laboratory set up, Panel selection etc., measurement of colour and consistency, (CIE system, working principles of Hunter colour difference meter, Disc colorimeter, Lovibond Tintometer, Spectrophotometer), Primary and secondary texture characteristics-consistency (Bostwick and Adams consistometer), viscosity (Efflux tube viscometer, Brooke field viscometer), texture measurement, texture measuring instruments, texture profile analysis, FPO regulations, FDA standards and procedure, Quality Control criteria for different foods. Microbiological examination of food products, Food adulteration and its detection, HACCP and ISO 9000-22000 in food industry. (FSSA, PFA, BIS, AGMARK).

Food Engineering-II: Heat transfer- mode of heat transfer, Methods of heat generation and application to food, steady and unsteady heat transfer, thermal process calculation, Principle of Mass Transfer, Diffusion, Molecular diffusion in fluids, diffusivity of fluids, mass transfer co-efficient in laminar flow of effective diffusivity, Rhoerenology of solid foods, Distillation – Vapour liquid equilibrium, relative volatility, flash & batch distillation, steam distillation, vacuum distillation, Distillation with reflux, McCabe Thiele Method of Calculation for number of theoretical Stages, total/minimum reflux ratio for McCabe-Thiele method,
Syllabus of Ph.D. Admission Test

Extraction: Liquid-liquid extraction, liquid-liquid extraction equipment, Leaching: Introduction, leaching equipment, Principles of continuous-counter current leaching, Gas liquid extraction.

Food Storage Engineering: Storage losses in agricultural commodities, Grain Storage: levels of storage, physical properties of grain affecting storability, types of spoilage and factors of spoilage, Control of factors of grain spoilage: microorganisms, insects and pests, rodents and other vertebrates, Rural storage structures for grains, Design considerations of bulk storage structures - grain pressure theories, air distribution systems and aeration fans, Design considerations of bag storage structures, Storage of perishables/ semi-perishables: factors of spoilage and their control, Advantages and limitations of refrigerated storage, Design aspects of cold storage-cooling load calculation and selection of components of refrigeration systems, Controlled atmosphere storage, biochemical aspect of CA storage, effects of concentrations of compositional gases on physico-chemical characteristics of Fruits and vegetables, Equipment for creating and maintaining controlled atmosphere.

Fruit and Vegetable Processing: Introduction: Status of production and processing of fruits and vegetables in India. Challenges before fruit and vegetable processing industry in India and government promotional policies. Postharvest losses in fruits and vegetables and their reasons, Chemical composition and nutritional values of fruits and vegetables. Postharvest physiology of fruits and vegetables: biochemistry of respiration, respiratory responses of climacteric and non-climacteric fruits. Physiological developments during maturation: Chemical and nutritional changes. Physiological disorders: chilling injury, its mechanism and preventive measures, mineral deficiency related disorders and their preventions, Processing techniques - Thermal processing: canning and bottling, drying/dehydration, concentration/evaporation. Freezing, methods and equipment, Fermented and unfermented fruit beverages, Quality evaluation of fruit and vegetable products, By-product utilization, economic considerations in fruit and vegetable processing.

Technology of Bakery and Confectionery Food: Status of bakery food in India. Technology of bread production. Different methods of bread manufacture, Quality control tests, gluten test, alcoholic acidity, dough raising capacity etc. Bread making, equipment and machine used in different unit operations, Cookies & biscuits manufacturing technology, biscuit shaping/ cutting machine, raw materials bulk and others, Role of baking ingredients, quality control of bread biscuits production. PFA rules for raw materials & products, use of preservatives and flour improvers, emulsifies and stabilizers. Technology of cake production, methods of
Syllabus of Ph.D. Admission Test

cake production, cake quality, cake faults. Different types of cake pastry formulation and production various type of pastry. Wafers, rusks and their production. Losses in baking, packaging of baked products, Bakery sanitation & hygiene. Sugar confectionary, various types of sugar used in confectionary, typical confectionary products like fondants, lozenges and drops, toffees, caramels and fudges, Jams, jellies and marmalades, Cocoa processing, cocoa powder and cocoa butter, Chocolate confectionary production technology.

**Industrial Fermentation:** Introduction and definition of fermentation and terms related to fermentation, nutritional value of fermented food, requirement’s of fermentation, various substrate used in fermentation different types of fomenters, Traditional fermented foods: Sauerkraut, oriental fermented foods like soy sauce, miso, tempeh, sofu etc, dairy fermented products, cultured milk, yoghurt, cheese production, production technology of baker’s yeast, citric acid production, uses of citric acid in food and other industries, Antibiotics production and Vinegar production, Alcoholic fermentation, Importance, sources, cultivation, purification, separation and isolation of microbial enzyme, conversion to storage form and immobilization of enzymes, industrial application of enzymes.
