

ACTION TAKING REPORT (ATR)

Interdisciplinary Department of Remote Sensing and GIS Applications is a newly created Department under the faculty of Science, AMU, Aligarh. The feedback received from the students and teachers are as:

The Department has none of the permanent academic and teaching faculty till date. The University has allotted old building for this Department. The condition of the building is very poor and deteriorated. There is a shortage of teaching staff and infrastructure for the benefit of students and Departmental development.

There is not a proper and upto date Seminar Library, having limited books for the students and staff. The funds are not enough to carry out the requirement of students, class rooms, labs should be well equipped and upto date at National or International standard as per the student's teachers requirements. The state-of-the-art development is urgently needed for the sake of student's scientific and technological development approaches. The Department needs separate room and toilet for the girl's students. The Department also needs vehicle for the student's field training tour/ground truth survey/collection of data to complete their project/research work. Moreover, the Department is managing or arranging latest lab instruments/software for Practical classes of PG students. Thus, the above feedback received from the students and teachers are communicated to the competent authority from time to time.
