Department of Post Harvest Engineering and Technology
FACULTY OF AGRICULTURAL SCIENCES
ALIGARH MUSLIM UNIVERSITY,
ALIGARH – 202002
D.No.100/PHET Date: 05.02.2018

MINUTES

The special meeting of the Board of Studies (BOS) of Department of Post Harvest Engineering and Technology held on 03.02.2018 at 12.00 Noon, in the Committee Room of new building of the Department. The following members were present:

1. Prof. N.C. Shahi : Coopted Member
2. Prof. Mohammad Idrees : Member
3. Prof. Javaid Talib : Member
4. Prof. Mohammad Ali Khan : Member
5. Er. Faizan Ahmad : Member
6. Prof. Saghir Ahmad : in Chair

Before taking of agenda for consideration, the chairman Welcomed all the members of B.O.S. He further thanked the members for attending the meeting on such short notice.

The following agenda items were considered

Item No.1 Considered the changes in nomenclature of the degree as per ICAR Vth Dean's Committee Report.
The curriculum and detailed syllabus was also changed as per ICAR instruction.

<table>
<thead>
<tr>
<th>A</th>
<th>Existing Nomenclature</th>
<th>Revised Nomenclature</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>M.Tech. in Agricultural Process and Food Engineering</td>
<td>M.Tech. in Processing and Food Engineering</td>
</tr>
</tbody>
</table>

Item No.2 Board of Studies Members authorized the chairman to allocate the teaching load for Ph.D. coursework. But matter related to appointment of examiners and moderator was withdrawn as it has to be passed from CASR.

Item No.3 Introduction of new Papers for Ph.D. coursework for the students admitted in the current session 2017-18 was taken up, however the members of board of studies advised to have separate papers for all three different students who are admitted in the current session 2017-18. This suggestion was taken up and minor changes was considered for course work as follows.

One of the students (Ph.D. scholar) opted the Research topic related to functional food, while another student admitted through ICAR quota opted research topic which falls under cereal Product Technology (PEM-1208).
The third student will be studying the Course- work paper already running in the Department viz Advances in meat & Poultry Product Technology. He has opted the Topic related to Meat and Poultry Processing.

The B.O.S members authorized the chairman to allocate the teaching load for Ph.D. Coursework and also make minor changes as and when required.

At the end of the meeting, the chairman thanked all the members for their cooperation and holding meeting amicably.

Prof. Sajid Ahmad
Chairman
EPTA, FE, B.Tech, Engg. & Tech.
A.M.U., Aligarh

Faculty of Agricultural Sciences
Aligarh Muslim University
Aligarh – 202002

Dated: 24-02-2018

Of the special faculty meeting held on 07-2-2018 at 3.00 p.m. in the new block of seminar library of the Faculty of Agricultural Sciences, Aligarh Muslim University, Aligarh.

Following members were present.

1. Prof. Saghir Ahmad Ansari, Dean, of Agricultural Sciences, (In the Chair)
2. Prof. Farzana Alim, Chairperson, Department of Home Science
3. Prof. M. Akram Khan, Chairperson, Department of AEBM
4. Prof. Saghir Ahmad, Chairperson, Department of PHET
5. Prof. Mujeebur Rehman Khan, Chairperson, Department of Plant Protection
6. Prof. Md. Saghir Khan, Chairperson, Department of Agricultural Microbiology
7. Prof. P.Q. Rizvi, Department of Plant Protection
8. Prof. Abdul Malik, Department of Agricultural Microbiology
9. Prof. Iqbal Ahmad, Department of Agricultural Microbiology
10. Prof. Mohd. Ali Khan, Department of PHET
11. Prof. Shabbir Ashraf, Department of Plant Protection
12. Prof. M. Shafiq Ansari, Department of Plant Protection
13. Dr. Raisullah Khan, Department of Plant Protection
14. Dr. Shams Tabrez Khan, Department of Agricultural Microbiology
15. Er. Faizan Ahmad, Department of PHET
16. Mr. Mohd. Shamsuzzaman, Department of AEBM
17. Dr. (Mrs.) Saba Khan, Department of Home Science

Before taking up the agenda, the Dean welcomed all the members.

Item No.1: The matter was discussed at length and it was unanimously decided that the B.Sc. (Ag.) course will be attached with the Department of Plant Protection.

Item No.2: Considered and approved the restructuring of course and course outline of courses in different departments accommodating ICAR guideline as follows:

Department of Home Science (BOS: 17-8-2017 and 02-01-2018)

   (Annex./2A)

2.2. Change of nomenclature in M.Sc. (Home Science)

<table>
<thead>
<tr>
<th></th>

</tbody>
</table>

*ICAR Quota

Department of PHET (BOS: 03-02-2018)

2.3: Considered the change in nomenclature in M.Tech. as per ICAR Vth Dean’s Committee report.  
(Annex-E-1)

| Existing nomenclature                          | Revised nomenclature                        |
| M.Tech. in Agricultural Process and Food Engineering | M.Tech. in Processing and Food Engineering |

2.4: Considered and approved revision in curriculum and restructured syllabus of M.Tech. Processing and Food Engineering as per ICAR guidelines.

(Annex.-2/E1)

Department of Plant Protection (BOS: 05-02-2018)

2.5: Considered and approved the revision of course structure and contents of M.Sc. (Ag.) Entomology and M.Sc. (Ag.) Plant Pathology in the light of ICAR guidelines and its implementation from the session 2018-19. It was also recommended that the above two courses may be referred for approval by the Vice-Chancellor under 19(3), however, M.Sc. (Ag.) Nematology course will go through normal process of approval.

(Annex.-2/F)

2.6: Considered and approved the bifurcation of M.Sc. (Ag.) Plant Pathology (with and without specialization of Plant Nematology) due to restructuring of syllabi of M.Sc. (Ag.) Plant Pathology in the light of ICAR guidelines into the following two PG courses.
• M.Sc. (Ag.) Plant Pathology
• M.Sc. (Ag.) Nematology

It is also considered that M.Sc. (Ag.) Plant Pathology with revised course structure will be implemented from the session 2018-19, whereas M.Sc. (Ag.) Nematology in place of M.Sc. (Ag.) Plant Pathology (specialization: Plant Nematology) will be offered from the session 2019-20.

(Annex.2/G)

2.7: Considered and approval the proposal for introducing one year Bridge course for non-agricultural graduates admitted in M.Sc. (Ag.) Entomology, M.Sc. (Ag.) Plant Pathology and M.Sc. (Ag.) Nematology.

(Annex.2/H)

Department of Agricultural Microbiology (BOS: 06-02-2018)

2.8: Considered and approved the restructuring of course structure and course outline of M.Sc. (Ag.) Microbiology accommodating the ICAR guidelines.

(Annex.2/I)

2.9: Considered and approved the proposal for introducing one year Bridge Course for non-agricultural graduates with the condition that it will be an optional course for B.Sc. non Agriculture graduates pursuing M.Sc. (Ag.) Microbiology.

(Annex.2/J)

Department of AEBM (BOS: 05-02-2018)

2.9: Considered and approved the restructuring of course structure and course outline of courses in accordance with the ICAR guidelines.

(Annex.2/K)
2.10. Considered and approved the proposal for introducing one year bridge course for non-agricultural graduates pursuing MBA-Agribusiness

(Annex 2/L)

An Ordinance Committee consisting of Chairpersons of all departments of Faculty was approved. Prof. Mohd. Saghir Khan, Chairperson, Department of Ag. Microbiology will be Convener of the committee. This committee will revise ordinances in the light of changes.

The meeting came to an end with thanks from the Dean.

(Prof. Saghir Ahmad Ansari)

Revised Course Syllabus

Of

M.Tech. (Processing and Food Engineering)

According to ICAR Guidelines

With effect from: Session 2018 – 19
(Approved in the BOS held on 03.02.2018)

Department of Post Harvest Engineering & Technology
Faculty of Agricultural Sciences
Aligarh Muslim University, Aligarh
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

FEM1007                Engineering Properties of Food Materials 2+1

Objective: To acquaint and equip the students with different techniques of measurement of engineering properties and their importance in the design of processing equipments.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Understand the physical, chemical, and mechanical properties of food and their handling and storage.

CO2: Determine the porosity and roundness of fruits and vegetables.

CO3: Apply the knowledge of properties in the designing of food processing equipments.

CO4: Gain practical knowledge of food properties.

CO5: Develop the conceptual knowledge of food properties which can be utilized at industrial level.

Theory:

UNIT-I

Physical characteristics: Importance of the engineering properties of the biological materials, Physical characteristics of different food grains, fruits and vegetables; Shape and size, description of shape and size, volume and density, porosity, surface area and their methods of determinations.

UNIT-II

Rheological properties: concept of Rheology and ASTM standard definitions of terms related to mechanical properties, physical states of a material, classical ideal materials, rheological models and rheological equations, visco-elasticity, creep-stress relaxation, Non-Newtonian fluid and viscometry, rheological properties of solid and liquid food, force, deformation, stress, strain, elastic, plastic behaviour.

UNIT-III

Thermal properties: Specific heat, thermal conductivity, thermal diffusivity, methods of determination, steady state and transient heat flow. Electrical properties; Dielectric loss
factor, loss tangent, A.C. conductivity and dielectric constant, method of determination, energy absorption from high frequency electric field.

UNIT-IV

**Aerodynamic, Hydrodynamic and Frictional Properties:** Drag coefficient, terminal velocity, Relation between Drag coefficient and Reynolds number, terminal velocity from time distance relation, Friction in agricultural materials, rolling resistance, angle of internal friction, angle of repose, Contact stresses between bodies, Hertz problems, firmness and hardness, mechanical damage, dead load and impact damage, vibration damage, friction, effect of load, sliding velocity, temperature, water film and surface roughness. Application of engineering properties in design and operation of agricultural equipment and structures.

**Practicals:**

1. Determination of physical properties like, length, breadth, thickness, surface area.
2. Determination of bulk density, porosity and true density.
3. Determination of coefficient of friction and angle of repose.
4. Determination of colour for various food grains, fruits, vegetables, spices and processed foods.
5. Determination of thermal properties like thermal conductivity, thermal diffusivity and specific heat of food materials.
6. Determination of rheological properties like firmness and hardness of grain and fruits
7. Determination of aerodynamic properties like terminal velocity, lift and drag force for food grains.

**Suggested Readings:**

New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

Objective(s):
I. To impart knowledge of different unit operations of food industries like size reduction, evaporation, drying, fluid flow and food freezing.
II. To introduce the concept of material and energy balance as applied to food engineering systems

Course Outcomes:
After the completion of the course the students will be able to:

CO1: Apply the principles of mass, heat transfer and thermodynamics to analyze and synthesize unit operations in food processing technology.

CO2: Familiarize with principles of fluid flow and basic unit operation principles of several food processing methods.

CO3: Understand basic principles and energy laws related to size reduction

CO4: Ability to make material and energy balances on unit operations and processes

CO5: Understand the concept of humidity and usage of psychometric chart.

CO6: Learn the principles of dehydration and types of dryers employed in food processing sector.

Theory:

Unit-I

Review of basic engineering mathematics; units and dimensions; mass and energy balance. Principles of Fluid Flow - Introduction to stress strain behaviour in materials; properties of fluid viscosity; capillary tube viscometer; power law equation for pseudoplastic; newtonian and dilatant fluids; flow in pipes-friction, laminar and turbulent flow equations, considerations in pumping fluid.

Unit-II

Size Reduction-Principles, types of equipments, applications and energy laws, Screening of solids, size measurement and analysis, standard sieves, Membrane Separation Processes.
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

Mixing: Objectives, equipments for solid, liquid mixing; energy requirements, mixing indices.

Unit-III
Food freezing - Properties of frozen foods; freezing point depression, general introduction to enthalpy change during freezing, Plank’s equation for predicting freezing time; food freezing equipment such as air blast freezers; plate freezers and immersion freezers.
Evaporation - Thermodynamics of evaporation; boiling point elevation; heat transfer during evaporation; heat transfer coefficients, design of evaporation system; retention time; single effect and multiple effect system; thermo-compression systems.

Unit-IV
Psychrometry - Principles, air properties; application in drying of foods.
Food dehydration - Basic principles of dehydration; constant rate and falling rate periods of dehydration; equilibrium moisture content; fixed bed dehydration; drum dehydration, and fluidized bed drying; spray drying of liquid foods, different types of dryer and their specific applications in food processing sector.

Practicals:
1. Study of fluid flow properties.
2. Study of heat exchangers.
3. Applications of psychrometric chart.
4. Determination of EMC.
5. Experiments on different types of driers and numerical problems.
7. Experiments on cleaning and sorting equipments.
8. Calculation for fruits and vegetables dehydration

Suggested Readings:
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

Objective(s):

To impart knowledge on principles of momentum, heat and mass transfer and its application in food processing, fundamental understanding of the laws of mass and energy balance, molecular diffusion and their application to food engineering; practical problems related to convective heat transfer process and its applications in food processing.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Ability to perform heat, mass and momentum transfer analysis.

CO2: Ability to analyze problems along with appropriate boundary conditions.

CO3: Ability to understand the chemical and physical transport processes and their mechanism.

CO4: Ability to develop steady and time dependent solutions along with their limitations.

Syllabus:

Unit-I

Introduction to transport (momentum, heat and mass transfer) phenomena and their analogous behaviour, steady and unsteady state heat conduction, analytical and numerical solution of unsteady state heat conduction equations, use of Gurnie-Lurie and Heisler Charts in solving heat conduction problems.

Unit-II

Equation of continuity, equation of motion, velocity distribution in circular pipes and parallel plates, Generalized form of equations and simplifications, expansion and reduction of basic transport equations to specific transport problems.
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

Unit-III
Convective heat transfer in food processing systems involving laminar and turbulent flow, 
Convective heat transfer – flow over flat plate - forced & natural convection, flow over 
cylinder - forced & natural convection; flow over spheres - forced & natural convection, 
laminar vs. turbulent flow.
Radiation heat transfer and its governing laws, its applications in food processing.

Unit-IV
Molecular diffusion in gases, liquids and solids; molecular diffusion in biological solutions 
and suspensions molecular diffusion in solids, unsteady state mass transfer and mass 
transfer coefficients, molecular diffusion with convection and chemical reaction, diffusion 
of gases in porous solids and capillaries, mass transfer applications in food processing.

Practicals:
1. Solving problems on steady and unsteady state momentum, heat and mass transfer
2. Numerical analysis on steady and unsteady state problems.
4. Solving problems on radiation heat transfer.
5. Design of heat exchangers.
6. Experiments on conduction, convection and radiation heat transfer.

Suggested Readings
FEM 1010 Dairy Products Processing 2+1

Objective:

To impart knowledge of principles of processing of milk and milk products.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Acquire the basic knowledge about constituents, pre-treatment and processing of milk.

CO2: Identify with the different types of milk and their production methods.

CO3: Learn about various milk products as well their manufacturing process.

CO4: Understand the different packaging and cleaning techniques employed in dairy industries.

Unit-I

Unit-II

Types of market milks: full cream, standardized milk, toned, double toned milks and their production methods. Processing of fluid milk: pasteurization, sterilization, separation and homogenization.

Unit-III

Technology of milk products: cream, butter, cheese, khova, whey, yoghurt, ice-cream, condensed and dried milk.

Unit-IV

Packaging of fluid milk and dairy products: glass bottles, flexible pouches, aseptic packaging system. Cleaning and sanitization of dairy plant equipments/machineries:
types of dairy detergents, methods and procedure of cleaning, basic principle of CIP cleaning.

**Practical:**

1. **Milk Testing - Platform Tests**
   - (a) organoleptic evaluation (OE)
   - (b) Clot on boiling test (COP)
   - (c) Alcohol test (AT)
   - (d) Sediment test (ST)
   - (e) Resazurin test (RT)

2. **Determination of Activity (Titrable Acidity) of Milk**

3. **Determine of Specific Gravity of Milk**

4. **Detection of Addition of Starch in Milk**

5. **Detection of Addition of Skim Milk, Milk Powder or Partial Removal of Fat from Milk**

**Suggested readings/text/references:**

1. The Technology of Milk Processing- CP Anantakrishnan and AQ Khan and PN Padmanabhan, Shri Lakshmi Publications, Madras.

2. Milk Products Preparation and Control- CP Anantakrishnan and AQ Khan and PN Padmanabhan, Shri Lakshmi Publications, Madras

3. Outline of Dairy Technology- Sukumar De, Oxford University Press

4. Dairy Plant Engineering and Management- Tufail Ahmad, Kitab Mahal, Allahabad
Objective(s):

1. To Impart knowledge of the objectives of food packaging and its role in food preservation during storage, transportation and distribution
2. To provide knowledge to the students about the types of packaging materials their properties and packaging systems.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Understand packaging materials and its importance in Food Industry
CO2: Adapt and utilize packaging materials for right application in Food Industry
CO3: Check barrier properties of packaging materials to avoid cross-contamination
CO4: Standardize testing methods for packaging materials to assure quality
CO5: Confirm packaging laws and regulations as per standards laid down by government agencies.

Theory:

Unit-I

Introduction of Packaging, Importance, definition and functions of food packaging, Packaging materials, suitability and cost factor, Glass (construction of jars and bottles, optical, thermal and mechanical properties of glass), Metal (types of base metal sheets, construction of metal cans, lacquering), Wooden boxes, Crates, Plywood, Corrugated and Fibre board boxes, Textiles and Paper sacks, Plastics- substituted different types of plastics used in food packaging, . Form-Fill-Seal packaging machines

Unit-II

Environmental factors and food stability; Effect of oxygen and light, Light Protection characteristics of packages, permeability to gases and vapours, methods of measuring permeability, permeability to fixed gases, permeability to humidified gases, flow through pin holes, cracks and imperfect seals, permeability of multilayer materials.

Unit-III
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

Packaging tests; tensile strength, compression, bursting, tear and impact test for packages, integrity testing of packages, cushioning effect on packaged foods, deterioration of packaged foods, shelf life calculation for packaged foods, water activity and sorption isotherms, water activity and food stability

**Unit-IV**

Packaging systems; Modified Atmosphere and Controlled Atmosphere Packaging, Aseptic Packaging including techniques, aseptic systems (Tetrapack, Bag-in-Box), integrity testing of aseptic packages.

**Practicals:**

1. Determination of thickness, substance weight, water absorption capacity of flexible packaging materials.
2. Studies on strength properties of packaging materials.
3. Determination of shelf life of packaged foodstuff.
5. Familiarization of types of packaging materials.

**Suggested readings/Text/References:**

1. Hand Book of Spices and Packaging with Formulae- Eiri Board, New Delhi,
3. Food Packaging Principles and Practice- Robertson, G.L., CRC Press
Objective: To acquaint and equip the students with various types of transducers for study and analysis of various variables.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Acquaint themselves with the classification of instruments, functional elements of instruments, static and dynamic performance characteristics, errors in measurements, and estimation of uncertainties in measurement systems.

CO2: Acquire an in-depth knowledge of the principles and working of various transducers and their applications in the food industry.

CO3: To possess a deep understanding of the measurement of food processing parameters and the related instruments.

CO4: To be aware of the principles and working of flow transducers, biomedical instruments, and instruments for composition analysis.

Theory:

UNIT-I

UNIT-II

UNIT-III
Measurement of food processing parameters: Temperature measurement using Bi-metals, PTRs, Thermistors, Thermocouples, Electronic IC sensors and Pyrometers. Heat flux measurement. Humidity measurement – Dry and Wet bulb, Hair hygrometer and Humister. Soil and Grain moisture transducers, Pressure measurement: Manometers, Bourdon Tube, Diaphragm type transducer. High pressure and vacuum sensing techniques.

UNIT-IV

Practicals:
1. Study the characteristics of various transducers: Potentiometer, LVDT, Proximity sensors and Photo pickups, Load cell, Thermistor and Thermocouple.
2. Study the characteristics of flow transducers: venturimeter, Rotameter and Orifice meter.

Suggested Readings
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

FEM 1014                      Low Temperature Preservation             2 + 1

Objectives:
I  To acquaint with thermodynamic principles of various types of refrigeration systems.
II  To acquaint with application of refrigeration engineering in food technology.

Course Outcomes:
After the completion of the course the students will be able to:

CO1: Understand the basic principles of refrigeration and air conditioning.

CO2: Analyze performance and working principle of air refrigeration systems, vapor compression refrigeration systems, vapour absorption refrigeration systems, and steam jet refrigeration systems.

CO3: Study the psychometric properties of air and utilize the principles of psychometric in the design of air conditioning equipments.

Theory:

UNIT I

UNIT II
Vapour-compression refrigeration cycle: definition of terms, simple and actual cycle with liquid refrigerant sub-cooling, vapour refrigerant superheating. Compound compression refrigeration system with inter-cooling, flash gas removal. Multi-evaporator systems.
UNIT III
Vapour absorption refrigeration system: aqua ammonia system, Munters-Platen system.
Gas cycle refrigeration: Bell Coleman cycle. Steam-jet refrigeration.

UNIT IV
Psychrometrics: definition of terms, psychrometric chart, psychrometric processes. Cold preservation of foods: freezing techniques- air freezing, contact freezing, immersion freezing.

Practical:
Solving problems on Psychrometry, study of various refrigeration systems, design aspect of cold storage, load estimation, construction, maintenance, static pressure drop, and experiment on controlled and modified atmosphere storage system.

Suggested readings:

Objective:

To acquaint and equip the students with different unit operations of food industries and their design features.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Understand the concept of basic unit operations involved in grain processing such as grading, husking, milling, and parboiling and their handling and storage.

CO2: Gain practical knowledge of extraction of edible and non edible oil, and time estimation in freezing and thermal processing.

CO3: Apply the practical knowledge of food process engineering at industrial level as well as in the designing of food process equipment.

CO4: Design the equipments such as single and multiple effect evaporators, plate and packed towers.

Theory:

UNIT-I

Importance of food processing in value addition, types of processing: primary, secondary and tertiary processing. Basic unit operations in grain processing: separations- cleaning and grading, shelling/husking, milling and material handling equipments. Milling of cereals: various methods of rice milling and associated equipments/plants. Roller milling of wheat, milling of corn, Parboiling of paddy and wheat, technology and equipments/plants for milling of major pulses, pigeon pea (dry and wet milling), Bengal gram, green gram, etc.

UNIT-II

Thermal processing: Death rate kinetics, thermal process calculations, methods of sterilization and equipments involved, Latest trends in thermal processing, Evaporation: Properties of liquids, heat and mass balance in single effect and multiple effect evaporator, aroma recovery, equipments and applications. Drying: Rates, equipments for solid, liquid
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

and semi-solid material and their applications, theories of drying, novel dehydration techniques.

Non-thermal processing: Microwave, irradiation, ohmic heating, pulsed electric field preservation, hydrostatic pressure technique etc.

UNIT-III

UNIT-IV
Sources of edible oils, general unit operations in oil milling, technology and equipments for oil milling: traditional, hydraulic, screw presses, Solvent extraction method of oil milling, principle of refining of edible oils.

Practicals:
1. Solving problems on single and multiple effect evaporator, distillation, crystallisation.
2. Solving problems on extraction, leaching, membrane separation and mixing.
3. Design of plate and packed tower.
4. Solving problems on time estimation in thermal processing
5. Extraction of oil (edible and non edible)

Suggested Readings
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

13. Handbook of Postharvest Technology- Chakraverty, Muzumdar, Raghavan, Ramaswamy (editors), Marcel Dekker Inc.
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

FEM 2010                  Mass Transfer Operations      2+1

Objective(s):
To impart knowledge on equilibrium stage separation processes and molecular diffusion.

Course Outcomes:
After the completion of the course the students will be able to:

CO1: Acquaint one with the fundamental concepts of mass transfer principles.

CO2: Understand the general principles of separation processes, extraction and leaching.

CO3: Identify and solve single and multistage mass transfer problems.

CO4: Understand basics of diffusion mass transfer and its application in food processing.

Theory:

Unit- I
Vapour-liquid separation processes: Vapour liquid equilibrium relations, relative volatility, flash & batch distillation, steam distillation, vacuum distillation, distillation with reflux single, stage and multistage equilibrium contact for vapour-liquid separation processes.

Unit- II
Extraction: Liquid-liquid extraction, liquid-liquid extraction equipment, single and multistage extraction, leaching: Introduction, leaching equipment, Principles of single and multistage continuous-counter current leaching.

Unit- III
Stage and continuous gas-liquids separation processes: types of separation processes and methods, equilibrium relations between phases, single and multiple absorption in plate and packed towers.

Unit-IV
Principles of mass transfer, introduction to mass transfer and diffusion, molecular diffusion in fluids, molecular diffusion in biological solutions, molecular diffusion in solids, diffusivity of fluids, mass transfer co-efficient in laminar flow of effective diffusivity.
Practicals:

1. Solving problems on vapour-liquid separation processes
2. Solving problems on liquid-liquid extraction
3. Solving problems on solid-liquid extraction
4. Solving problems on absorption
5. Experiments on steam distillation
6. Experiments on solid liquid extraction

Suggested readings/Text/References:

Objective(s):

I. To explain the status of meat, poultry and fish production.

II. To impart knowledge of processing and preservation techniques of meat, poultry and fish products.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: To identify the principles of keeping animals in liarage and slaughtering of the meat animals in slaughter house.

CO2: To educate the students about the primal cuts of the meat.

CO3: Apply the principles of HACCP for meat production, packaging, freezing during frozen storage.

CO4: To adapt the safe system of meat transportation and distribution.

CO5: To apply principle of SOP during meat product development.

Theory:

Unit-I

Status of meat industries, export oriented and integrated plants, municipal slaughter houses vs. modern slaughter house Meat composition, its nutritive aspect, meat production, animal and poultry slaughtering, post-mortem changes, physicochemical changes, post rigor condition of meat, PSE and DFD conditions of meat, whole sale cuts of carcass, Meat refrigeration, freezing, thawing and frozen storage.

Unit-II

New Syllabus: M.Tech (Processing and Food Engineering)

(Approved in the BOS held on 03.02.2018)

Unit-III

Unit-IV
Fish Processing: Types of fish, composition and nutritive value, factors affecting the quality of fish. Drying, Curing, salting, Smoking, Freezing and Canning of fishes, By-products of meat, fish, and poultry industry and their uses.

Practicals:
1. Curing of Meat
2. Meat Smoking
3. Primal cuts of meat
4. Meat Sausage preparation
5. Meat Kabab
6. Meat balls

Suggested readings/Text/References:
1. Processed Meats- Pearson, A.M. and Gillett, T.A, ASPEN Publication
2. Food Technology and Applications- Bowers, J.
Objective(s):

I. To acquaint with principle and procedure of different techniques used in quality evaluation.

II. To impart knowledge of food regulations and standards.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Identify the principles of analysis both (Proximate and Ultimate) to match the food standards.

CO2: To provide directions to Food industry for Food Quality Standards.

CO3: To educate the students for handling of the instruments for study of quality characteristics.

CO4: To educate the students about the Food Regulations of National and International Standards viz. FPO-1945, FSSAT-2006, CAC-1979 etc. to prevent fraudulent practices.

CO5: To understand the Food Safety and Hygiene.

CO6: To evaluate sensory quality test with instrument.

Theory:

Unit-I

Proximate constituents and their evaluation/analysis; Estimation of moisture content, ash content, protein, fat and sugar content. Ultimate constituents; vitamins and pigments analysis.

Unit - II

Examination of canned food products, FAO/WHO Codex Alimentarius Commission standard of canned pine apple, particulars of specifications, essential composition, allowances and defects, standards and analysis of water.

Unit-III
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

Sensory evaluation- methods, Difference, Rating Sensitivity tests, and interpretation of results, requirements for sensory evaluation e.g. Laboratory set up, Panel selection etc., measurement of colour and consistency, (CIE system, working principles of Hunter colour difference meter, Disc colorimeter, Lovibond Tintometer, Spectrophotometer), Primary and secondary texture characteristics-consistency (Bostwick and Adams consistometer), viscosity (Efflux tube viscometer, Brooke field viscometer), texture measurement, texture measuring instruments, texture profile analysis

Unit-IV

FPO regulations, FDA standards and procedure, Quality Control criteria for different foods. Microbiological examination of food products, Food adulteration and its detection, HACCP and ISO 9000-22000 in food industry. (FSSA, PFA, BIS, AGMARK).

Practicals: Analysis of food constituents

1. Proximate analysis of fruits and vegetables
   a) Estimation of moisture content
   b) Estimation of ash content
   c) Estimation of protein
   d) Estimation of fat
   e) Estimation of sugar content

2. Estimation of Vitamin C

3. Estimation of lycopene and chlorophyll

4. Estimation of pectin of Guava

5. Microbial examination of food

6. HACCP principle and control chart

Suggested readings/Text/References:

Objective: To give fundamental and applied knowledge of experimental designing and statistical application in agriculture.

**Course Outcomes:**

*After the completion of the course the students will be able to:*

**CO1:** Understand the basic concept of statistics in agriculture including frequency curve and its characteristics, Measures of dispersion - standard deviation (SD) and standard error (SE).

**CO2:** Identify common and important types of experimental designs with respective advantages and disadvantages

**CO3:** Choose an appropriate design in a given research setting.

**CO4:** Perform a correct statistical analysis of different types of designs using appropriate software such as MINITAB, R-Analysis, and SPSS.

**Theory:**

**Unit -I**

**Unit -II**
Principles of experimental designs; completely randomized design (CRD), randomized block design (RBD), latin square design (LSD) and split plot design (SPD).

**Unit -III**

**Unit -IV**
Application packages of statistical analysis: R-analysis, MINITAB and SPSS.

**Suggested Readings/Texts/References**
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

2. Panse V.G. and Sukhatme P.V. 1989. Publication and Information Division Indian Council of Agricultural Research, New Delhi
3. Ambedkar S.J. 2013. Statistical Methods for Agricultural and Biological Sciences, Narosa Publishing House, India
http://www.R-project.org/.
FEM 2024  Food Chemistry and Microbiology  2+1

Objective(s):

I. To acquaint with the basic knowledge of chemistry microbiology of foods.
II. To impart knowledge which would be useful to the students after they complete the program and go to practical field.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Understand the classification, biological functions and nutritional importance of carbohydrates, lipids and proteins during storage and processing of food with emphasis on food industry applications.

CO2: Gain knowledge of vitamins, minerals, pigments and flavors of food and their importance in the food industry.

CO3: Classify enzymes and understand their kinetics, including factors affecting the enzyme catalyzed reaction rate and the role of enzyme inhibitors.

CO4: Comprehend the need and scope of food microbiology and enumerate the important genera of micro-organisms associated with food.

CO5: Develop the conceptual knowledge of culture maintenance and preservation, contamination of foods, microbial spoilage of various food products, and microbiology of water, food infection and food intoxication.

Theory:

Unit-I

Classification, biological functions and nutritional importance of carbohydrate, Structures of mono, di and polysaccharides, optical isomerism in sugars, role of storage and structural polysaccharide in nutrition, properties of polysaccharides and their hydrolysis, Classification, biological functions and nutritional importance of proteins and lipids, physical and chemical properties of fats and oils,

Unit-II

Vitamins and minerals, their sources and importance in human health, Enzymes classification, kinetics of enzyme catalyzed reaction, Factors affecting the enzyme
catalyzed reaction rate, Mechelis Menton equation and its derivation, enzyme inhibitors, Food pigments and Food flavour.

**Unit-III**

Introduction to microbiology: Cell theory, difference between prokaryotic and eukaryotic cells, Haeckel’s Kingdom protista, Whittaker five kingdom classification, Germ theory and Koch’s postulates, Structures and types of microbial cells (bacteria, molds and yeasts). Growth curve and its different phases, Factors affecting microbial growth.

**Unit-IV**

Microbial Growth: Culture maintenance and preservation. Contamination of foods, Microbial spoilage of dairy products, meat, fish, poultry & egg products, fruits & vegetable products, Cereal grains, bakery and confectionery products, fermented and canned foods. Microbiology of water, Food infection and food intoxication.

**Practicals:**

1. Identification of bacteria by Gram staining
2. Study on morphology of molds
3. Identification of yeast & mold in a given food
4. Estimation of total plate count
5. Estimation of total yeast & mold count
6. Estimation of peroxide value of fat samples
7. Estimation of TBA number

**Suggested readings/Text/References:**

Objective

To acquaint and equip the students with processing of fruits and vegetables and the design features of the equipments used for their processing.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Analyze the nutritional aspects in fruit and vegetables

CO2: Provide solution for spoilage of fruit and vegetables while handling and storage.

CO3: Set up new processing flow line for new products with quality standards.

CO4: Set quality assurance policy in process flow meeting the standards for effective output.

CO5: Set up Fruits and Vegetables processing flow line with quality standards

Theory:

UNIT I

Importance of post harvest technology of fruits and vegetables. Structure, cellular components, composition and nutritive value of fruits and vegetables, fruit ripening, spoilage of fruits and vegetables. Physiological disorders and mineral deficiency related disorders and their preventions.

UNIT II

Harvesting and washing, pre-cooling, preservation of fruits and vegetables, blanching, commercial canning of fruits and vegetables, minimal processing of fruits and vegetables. Radiation preservation of fruits and vegetables, irradiation sources.

UNIT III

High pressure processing of fruits and vegetables and its applications. Cold storage of fruits and vegetables, controlled atmosphere packaging of fruits and vegetables, gas composition, quality of storage.

UNIT IV

Dehydration of fruits and vegetables: osmotic dehydration, foam mat drying, freeze
New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

drying. Intermediate moisture foods, Sensory evaluation of fruit and vegetable products, packaging technology for fruits and vegetables, general principles of quality standards and control, FPO, quality attributes.

Practical

1. Determination of size, shape, density, area-volume-mass relationship of fruits and vegetables,
2. Sugar-acid ratio of fruits,
3. Evaluation of washer, grader and packaging methods,
4. Experiments on drying of fruits and vegetables,
5. Controlled atmosphere storage and quality evaluation.

Suggested Readings

FEM 3007        Mathematical Models in Food Processing    3+0

Objective(s):

To provide the basic concepts of various mathematical modelling techniques, applications of mathematical modelling in food processing and microbial destructions.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Assess the use of mathematical models in food industry in terms of mathematical techniques knowledge.

CO2: Develop model equations for the given system and demonstrate the model solving ability for various processes/unit operations.

CO3: Formulate and qualitatively analyze mathematical models of a wide range of systems and processes.

Theory:

Unit-I

An overview of the modeling process. Introduction to mathematical, correlative and explanatory models, need of models and their classification. Formulation, idealization and simplification of the problems.

Unit-II

Probability models, series and linear mathematical approximation, dynamic and interacting dynamic processes.

Unit-III

Applications of mathematical modelling techniques to food processing equipment/operations like mixing, evaporation, parboiling, separation processes, convective drying, dehydration, shelf-life prediction, moisture diffusion, deep fat drying, microwave processing, infrared heating and ohmic heating. Stochastic finite element analysis of thermal food processes. Neural networks approach to modelling food processing operations.
Unit-IV

Microbial growth dynamics models, thermal death rate kinetics of micro-organisms, thermal process time for sterilization, models of pasteurization/sterilization.

Suggested Readings

New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

FEM 3021               Food Processing Equipment and Plant Design         2+1

Objective:
To acquaint and equip the students with the design features of different food processing equipments being used in the industries and with the layout, planning of different food and processing plants.

Course Outcomes:
After the completion of the course the students will be able to:

CO1: Understand the overall plant design concept including plant layout, plant location, factors affecting the plant location, design and testing standard etc.

CO2: Determine the requirement of plant utilities for any food processing plant design.

CO3: Analyze various facts of food plant design such as estimation of break-even and economic plant size, estimation of capital investment, analysis of plant costs and profitability’s.

CO4: Gain the practical knowledge of designing of machineries used at different stages of food processing, such as for drying, milling, grinding, evaporation, etc.

Theory:
UNIT-I
Design considerations of processing agricultural and food products. Plant design concepts and general design considerations: Plant layout, plant location, location factors and their interaction with plant location, location theory models, and computer aided selection of the location. Human factors in design, selection of materials of construction and standard component, design standards and testing standards.

UNIT-II
Feasibility analysis and preparation of feasibility report: plant size, factors affecting plant size and their interactions, estimation of break-even and economic plant size; Product and process design, process selection, process flow charts, Plant utilities, electricity, water, steam, air, raw material requirements and computer aided development of flow charts.
UNIT- III
Hygienic design aspects and worker’s safety, functional design of plant building and selection of building materials, estimation of capital investment, analysis of plant costs and profitability’s, management techniques in plant design including applications of network analysis, preparation of project report and its appraisal.

UNIT-IV
Design of machinery for drying, milling, separation, grinding, mixing, evaporation, condensation, membrane separation.

Practicals:
1. Detailed design and drawing of mechanical dryers, milling equipment, separators, evaporators, and mixers.
2. Each individual student will be asked to select a food processing plant system and develop a plant design report which shall include product identification and selection, site selection, estimation of plant size, process and equipment selection, process flow-sheeting, plant layout, and its evaluation and profitability analysis.
3. Design of Pressure vessels, storage tank, and shell and tube heat exchanger

Suggested Readings
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

FEM 3022           Industrial Fermentation                   2+1

Objective:
To acquaint with principle and techniques of fermentation and its application to processing and preservation of all types of food.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Identify the principles of enzymology and the effect of fermentation on nutritional value of the processed food.

CO2: Apply the principles of fermentation in the development of Food products of commercial value.

CO3: Apply industrial fermentation for development of non-food products like Penicillin and beer.

CO4: Identify the commercial products like produced by alcoholic fermentation and application of commercial enzymes.

CO5: Exploit the activity of Microorganism for commercial production of enzymes.

Theory:

Unit-I
Introduction and definition of fermentation and terms related to fermentation, nutritional value of fermented food, requirement’s of fermentation, various substrate used in fermentation different types of fomenters

Unit-II
Traditional fermented foods: Sauerkraut, oriental fermented foods like soy sauce, miso, tempeh, sofu etc, dairy fermented products, cultured milk, yoghurt, cheese production,

Unit-III
production technology of baker’s yeast, citric acid production, uses of citric acid in food and other industries, Antibiotics production and Vinegar production,
Unit-IV
Alcoholic fermentation, Importance, sources, cultivation, purification, separation and isolation of microbial enzyme, conversion to storage form and immobilization of enzymes, industrial application of enzymes.

Practicals:
1. Fermentation of cabbage for preparation of sauerkraut
2. Fermentation of mixed-vegetables to make pickle
3. Fermentation of can juice to produce vinegar

Suggested readings/Text/References:
1. Industrial microbiology- Prescott & Dunns, Agrobios (India)
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

FEM 3075           Master Seminar       1+0

Objective:

- Get an opportunity to read, and understand published research articles relating to food process engineering and allied fields.
- To critically evaluate and analyze published scientific and technical literature.
- Acquire good oral and written communication skills.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Read and understand technical papers in agriculture and food process engineering.

CO2: To identify and formulate broadly defined chemical engineering problems by critically evaluating the published literature.

CO3: To communicate effectively and professionally.

CO4: To employ state of the art research tools and methods for solving contemporary chemical engineering problems.

Course Syllabus:

The student will be required to search scientific /technical literature in the emerging areas of food process engineering and allied fields in Journals and periodicals (both hard copies and e-journals) and select two research papers of his/her interest. He/she shall comprehend the paper and present the same orally to the gathering of staff and students using ICT tools. Seminar presentation guidelines shall be provided to the students. The seminars shall be evaluated by the associated faculty based on the understanding, presentation, content, and quality of the PPT.
FEM 3074         Industry/Institute Training     0+1 (NC)

Objective:
   To expose the students to the Industry/Institute.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: To write and deliver technical talks.
CO2: Understand professional and ethical responsibility.
CO3: Communicate effectively in English.
CO4: Recognize the need and an ability to engage themselves in life-long learning.
CO5: Adopt themselves in working environment.
CO6: Gain the practical and fundamental knowledge of unit operation and process, principle of management and economics involved in industries.

Theory:
In-plant training in the relevant food industry during processing operation of the plant to study the actual working of the equipment and various unit operations. The evaluation will be based on the written report of the student and the comments of the factory managers. The duration of training shall be three weeks. The student shall be required to do training in the institute other than the institute in which he/she is enrolled.
FEM 4071          Masters Research          20

Objective:

To develop research and project writing skills in students.

Course Outcomes:

After the completion of the course the students will be able to:

CO1: Study and understand technical papers related to his research work in the area of agriculture and food process engineering.

CO2: Apply the concepts and principles involved in the courses related to mathematical analysis, heat and mass transfer, unit operation, and statistical analysis.

CO3: Employ state of the art research tools and methods for solving the selected problem.

CO4: Present his research work effectively and professionally.

Theory:

A research project will be allotted to each student after the III semester. They will be required to complete the data collection, analysis and writing of dissertation so as to submit it at the end of IV Semester and to present it at seminar.
COMPULSORY NON-CREDIT COURSES

FEM 1072  Library and Information Services  0+1

Objective:
To equip the library users with skills to trace information from libraries efficiently, to apprise them of information and knowledge resources, to carry out literature survey, to formulate information search strategies, and to use modern tools (Internet, OPAC, search engines etc.) of information search.

Practical:
Introduction to library and its services; Role of libraries in education, research and technology transfer; Classification systems and organization of library; Sources of information- Primary Sources, Secondary Sources and Tertiary Sources; Intricacies of abstracting and indexing services (Science Citation Index, Biological Abstracts, Chemical Abstracts, CABI Abstracts, etc.); Tracing information from reference sources; Literature survey; Citation techniques/Preparation of bibliography; Use of CD-ROM Databases, Online Public Access Catalogue and other computerized library services; Use of Internet including search engines and its resources; e-resources access methods.
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

FEM 1073  Technical Writing and Communications Skills  0+1

Objective

To equip the students/scholars with skills to write dissertations, research papers, etc. To equip the students/scholars with skills to communicate and articulate in English (verbal as well as writing).

Practical

Technical Writing - Various forms of scientific writings- theses, technical papers, reviews, manuals, etc; Various parts of thesis and research communications (title page, authorship contents page, preface, introduction review of literature, material and methods, experimental results and discussion); Writing of abstracts, summaries, précis, citations etc.; commonly used abbreviations in the theses and research communications; illustrations, photographs and drawings with suitable captions; pagination, numbering of tables and illustrations; Writing of numbers and dates in scientific write-ups; Editing and proof-reading; Writing of a review article.

Communication Skills - Grammar (Tenses, parts of speech, clauses, punctuation marks); Error analysis (Common errors); Concord; Collocation; Phonetic symbols and transcription; Accentual pattern: Weak forms in connected speech: Participation in group discussion: Facing an interview; presentation of scientific papers.

Suggested Readings

Objective

The main objective of this course is to equip students and stakeholders with knowledge of intellectual property rights (IPR) related protection systems, their significance and use of IPR as a tool for wealth and value creation in a knowledge-based economy.

Theory

Historical perspectives and need for the introduction of Intellectual Property Right regime; TRIPs and various provisions in TRIPS Agreement; Intellectual Property and Intellectual Property Rights (IPR), benefits of securing IPRs; Indian Legislations for the protection of various types of Intellectual Properties; Fundamentals of patents, copyrights, geographical indications, designs and layout, trade secrets and traditional knowledge, trademarks, protection of plant varieties and farmers’ rights and biodiversity protection; Protectable subject matters, protection in biotechnology, protection of other biological materials, ownership and period of protection; National Biodiversity protection initiatives; Convention on Biological Diversity; International Treaty on Plant Genetic Resources for Food and Agriculture; Licensing of technologies, Material transfer agreements, Research collaboration Agreement, License Agreement.

Suggested Readings

New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

7. The Indian Acts - Patents Act, 1970 and amendments; Design Act, 2000;

8. Trademarks Act, 1999; The Copyright Act, 1957 and amendments; Layout

New Syllabus: M.Tech (Processing and Food Engineering)  
(Approved in the BOS held on 03.02.2018)

FEM 2073  
Basic Concepts In Laboratory Techniques  
0+1

**Objective**

To acquaint the students about the basics of commonly used techniques in laboratory.

**Practical**

Safety measures while in Lab; Handling of chemical substances; Use of burettes, pipettes, measuring cylinders, flasks, separatory funnel, condensers, micropipettes and vaccupets; ashing, drying and sterilization of glassware; Drying of solvents/chemicals. Weighing and preparation of solutions of different strengths and their dilution; Handling techniques of solutions; Preparation of different agro-chemical doses in field and pot applications; Preparation of solutions of acids; Neutralisation of acid and bases; Preparation of buffers of different strengths and pH values. Use and handling of microscope, laminar flow, vacuum pumps, viscometer, thermometer, magnetic stirrer, micro-ovens, incubators, sand bath, water bath, oil bath; Electric wiring and earthing. Preparation of media and methods of sterilization; Seed viability testing, testing of pollen viability; Tissue culture of crop plants; Description of flowering plants in botanical terms in relation to taxonomy.

**Suggested Readings**

Objective:
To enlighten the students about the organization and functioning of agricultural research systems at national and international levels, research ethics, and rural development programmes and policies of Government.

Theory:

UNIT I
History of agriculture in brief; Global agricultural research system: need, scope, opportunities; Role in promoting food security, reducing poverty and protecting the environment; National Agricultural Research Systems (NARS) and Regional Agricultural Research Institutions; Consultative Group on International Agricultural Research (CGIAR): International Agricultural Research Centres (IARC), partnership with NARS, role as a partner in the global agricultural research system, strengthening capacities at national and regional levels; International fellowships for scientific mobility.

UNIT II
Research ethics: research integrity, research safety in laboratories, welfare of animals used in research, computer ethics, standards and problems in research ethics.

UNIT III
Concept and connotations of rural development, rural development policies and strategies. Rural development programmes: Community Development Programme, Intensive Agricultural District Programme, Special group – Area Specific Programme, Integrated Rural Development Programme (IRDP) Panchayati Raj Institutions, Cooperatives, Voluntary Agencies/Non-Governmental Organisations. Critical evaluation of rural development policies and programmes. Constraints in implementation of rural policies and programmes.

Suggested Readings:
New Syllabus: M.Tech (Processing and Food Engineering)
(Approved in the BOS held on 03.02.2018)

FEM 3073 Disaster Management 1+0

Objective
To introduce learners to the key concepts and practices of natural disaster management; to equip them to conduct thorough assessment of hazards, and risks vulnerability; and capacity building.

Theory:

UNIT I
Natural Disasters- Meaning and nature of natural disasters, their types and effects. Floods, Drought, Cyclone, Earthquakes, Landslides, Avalanches

UNIT II
Man Made Disasters- Nuclear disasters, chemical disasters, biological disasters, building fire, coal fire, forest fire. Oil fire, air pollution, water pollution, deforestation, Industrial wastewater pollution, road accidents, rail accidents, air accidents, sea accidents.

UNIT III
Disaster Management- Efforts to mitigate natural disasters at national and global levels. International Strategy for Disaster reduction. Concept of disaster management, national disaster management framework; financial arrangements; role of NGOs, Community-based organizations, and media. Central, State, District and local Administration; Armed forces in Disaster response; Disaster response: Police and other organizations.

Syllabus
M. Tech. in Agricultural Process and Food Engineering

Semester-I

Title of the paper: Food Chemistry and Microbiology (FEM-1001)

Objective(s):
I. To acquaint with the basic knowledge of chemistry microbiology of foods.
II. To impart knowledge which would be useful to the students after they complete the program and go to practical field.

Credits-4

Unit-I
Classification, biological functions and nutritional importance of carbohydrate, Structures of mono, di and polysaccharides, optical isomerism in sugars, role of storage and structural polysaccharide in nutrition, properties of polysaccharides and their hydrolysis, Classification, biological functions and nutritional importance of proteins and lipids, physical and chemical properties of fats and oils.

Unit-II
Vitamins and minerals, their sources and importance in human health, Enzymes classification, kinetics of enzyme catalyzed reaction, Factors affecting the enzyme catalyzed reaction rate, Mechanis Menton equation and its derivation, enzyme inhibitors, Food pigments and Food flavour.

Unit-III
Introduction to microbiology: Cell theory, difference between prokaryotic and eukaryotic cells, Haeckel’s Kingdom protista, Whittaker five kingdom classification, Germ theory and Koch’s postulates, Structures and types of microbial cells (bacteria, molds and yeasts). Growth curve and its different phases, Factors affecting microbial growth.

Unit-IV
Microbial Growth: Culture maintenance and preservation. Contamination of foods, Microbial spoilage of dairy products, meat, fish, poultry & egg products, fruits & vegetable products, Cereal grains, bakery and confectionery products, fermented and canned foods. Microbiology of water, Food infection and food intoxication.

Suggested readings/Text/References:

Semester-I
Title of the paper: Process Instrumentation and Control (FEM-1002)

Objective(s):
I. To develop understanding in students for proper application of instruments in scientific studies.
II. To acquaint with principle of functioning of various instruments used in food process industry.

Credits-4

Unit-I

Unit-II

Unit-III
Transducers: analog transducers-electromechanical transducers, opto-electric transducers, digital transducers-encoder discs, frequency domain transducers. Signal conditioners: amplifiers, filters, integrating and differentiating elements, analog-to-digital converters. Indicating, recording & display elements: CRO, galvanometric recorders and displays, servo type potentiometric recorder, etc.

Unit-IV
Measurement of food processing parameters: Temperature, pressure, flow, specific gravity, viscosity, liquid level, humidity, etc. Instruments for the measurement of calorific value, dust concentration and pollution of water/air.

Suggested readings/text_references:
Objective(s):
I. To impart knowledge on particle size analysis, size reduction, separation of solid particles from fluids.
II. To introduce the concept of material and energy balance as applied to food engineering systems.

Credits-4
Unit -I
Size reduction and screening of solids: dry and wet grinding, size reduction equipment, size measurement and analysis, standard sieves. Membrane separation processes.

Unit -II
Fluidization: Fluidization Characteristics, liquid solid fluidization, minimum fluidization, voidage and minimum fluidization velocity.

Unit -III
Filtration-Theory of filtration and washing filter aids filter media, classification of filtration, Design of filtration equipment.

Unit -IV
Mixing and Agitation, Mixing phenomena, Flow pattern and impellers, vortex formation and prevention, Mixing equipment; Centrifugation, Material balance, Energy balance, kinetics of chemical reactions in foods.

Suggested readings/Text/References:
Semester-I
Title of the Paper: Transport Processes (FEM-1004)

Objective(s):
   I. To impart knowledge on momentum, heat and mass transfer in food engineering systems.

Credits-2

Unit- I
General introduction to transport phenomena, basic microscopic momentum transfer, laws of molecular transport.

Unit -II
Equation of continuity, equation of motion, velocity distribution in circular pipes and parallel plates, Generalized form of equations and simplifications, expansion and reduction of basic transport equations to specific transport problems.

Unit -III
Thermal energy and species transport equations, Steady, unsteady, unidimensional, multidimensional thermal energy processes.

Unit -IV
Molecular diffusion, Fick's law, diffusion in solids, liquids and gases, heat and mass transfer analogy.

Suggested readings/Text/References:
Semester-I
Title of the paper: Refrigeration Engineering (FEM-1005)

Objective(s):
I. To acquaint with thermodynamic principles of various types refrigeration systems.
II. To acquaint with application of refrigeration engineering in food technology.

Credits-4

Unit-I

Unit-II
Vapour-compression refrigeration cycle: definition of terms, simple and actual cycle with liquid refrigerant sub-cooling, vapour refrigerant superheating. Compound compression refrigeration system with inter-cooling, flash gas removal. Multi-evaporator systems.

Unit-III
Vapour absorption refrigeration system: aqua ammonia system, Munters-Platen system. Gas cycle refrigeration: Bell Coleman cycle. Steam-jet refrigeration.

Unit-IV
Psychrometrics: definition of terms, psychrometric chart, psychrometric processes. Cold preservation of foods: freezing techniques- air freezing, contact freezing, immersion freezing.

Suggested readings/text/references:
Semester-I

Title of the paper: Engineering Properties of Biological Materials (FEM-1006)

Objective(s):
I. To acquaint with properties of bio materials helpful in designing of machines and equipment.
II. To impart knowledge which would be useful to the students after they complete the program and go to practical field.

Credits-4

Unit-I
Importance of the engineering properties of the biological materials, physical properties of food materials, viz. shape, size, specific gravity, porosity, and their methods of determinations.

Unit-II
Thermal properties: viz. specific heat, thermal conductivity and thermal diffusivity and their determinations, Dielectric properties of foods, Optical Properties.

Unit-III
Aerodynamic and Hydrodynamic and Frictional properties, Drag coefficient, terminal velocity, Relation between Drag coefficient and Reynolds number, terminal velocity from time distance relation, Application to agricultural products, Frictional properties, rolling resistance, angle of repose, definition and method of determination.

Unit-IV
Rheological properties: concept of Rheology and ASTM definitions of terms related to mechanical properties, Force-deformation curve of the agricultural products, Classical ideal materials, basic rheological models and their interpretation, rheological properties of solid and liquid food, rheological equations.

Suggested readings/Text/References:

1. Food Processing: Biological Appl.- Marwara S.,
Semester-I

Title of the paper: Food Microbiology and Engineering Laboratory (FEM-1071)

Objective(s):
I. To impart practical knowledge of food microbiology and food engineering.

Credits-2

List of Experiments:
1. Gram staining of given bacterial culture.
2. Determination of TPC by serial dilution method.
3. Identification of moulds in a given food sample.
5. Determination of apparent density and sphericity of a potato tuber.
6. Determination of surface area of a leaf.
7. To study particle size distribution and specific energy requirement in size reduction.
8. To study filtration through plate and frame filter.
9. To study the flow through fluidized bed.
10. To study the drying characteristics of potato slices in a dryer.
Objective(s):
   I. To explain the status of meat, poultry and fish production.
   II. To impart knowledge of processing and preservation techniques of meat, poultry and fish products.

Credits-2
Unit-I
Status of meat industries, export oriented and integrated plants, municipal slaughter houses vs. modern slaughter house Meat composition, its nutritive aspect, meat production, animal and poultry slaughtering, post-mortem changes, physicochemical changes, post rigor condition of meat, PSE and DFD conditions of meat, whole sale cuts of carcass, Meat refrigeration, freezing, thawing and frozen storage.

Unit-II

Unit-III

Unit-IV
Fish Processing: Types of fish, composition and nutritive value, factors affecting the quality of fish. Drying, Curing, salting, Smoking, Freezing and Canning of fishes, By-products of meat, fish, and poultry industry and their uses.

Suggested readings/Text/References:
1. Processed Meats- Pearson, A.M. and Gillett, T.A, ASPEN Publication
2. Food Technology and Applications- Bowers, J.
Semester-II

Title of the paper: Food Process Engineering (FEM-2002)

Credits-2

Unit-I
Introduction: Importance of food processing in value addition. Types of processing: primary, secondary and tertiary processing. Basic unit operations in grain processing: separations - cleaning and grading, shelling/husking, milling and material handling equipments.

Unit-II
Milling of cereals: various methods of rice milling and associated equipments/plants. Roller milling of wheat, milling of corn. Parboiling of paddy and wheat. Technology and equipments/plants for milling of major pulses, pigeon pea (dry and wet milling), Bengal gram, green gram, etc.

Unit-III

Unit-IV
Processing technologies for major spices and condiments, principle of extraction of oleoresins including super-critical carbon dioxide method. Processing of plantation crops: tea, coffee and cocoa. Manufacturing of sugar from sugarcane.

Suggested readings/text/references:
3. Handbook of Postharvest Technology- Chakraverty, Muzumdar, Raghavan, Ramaswamy (editors), Marcel Dekker Inc.
Semester-II
Title of the Paper: Food Engineering-II (FEM-2003)
Objective(s):
I. To impart knowledge on thermal processes, molecular diffusion and separation processes.
Credits-4
Unit- I

Heat transfer- mode of heat transfer. Methods of heat generation and application to food, steady and unsteady heat transfer, thermal process calculation.
Unit -II
Mass Transfer-
Principle of Mass Transfer, Diffusion, Molecular diffusion in fluids, diffusivity of fluids, mass transfer co-efficient in laminar flow of effective diffusivity. Rheology of solid foods.
Unit - III
Distillation – Vapour liquid equilibrium, relative volatility, flash & batch distillation, steam distillation, vacuum distillation, Distillation with reflux, McCabe Thiele Method of Calculation for number of theoretical Stages, total/minimum reflux ratio for McCabe-Thiele method
Unit- IV
Extraction: Liquid-liquid extraction, liquid-liquid extraction equipment, Leaching: Introduction, leaching equipment, Principles of continuous-counter current leaching. Gas liquid extraction.
Suggested readings/Text/References:
Semester-II
Title of the paper: Biomass Utilization and Renewable Energy Management (FEM-2004)

Objective(s):
I. To make the students aware of importance of energy management and conservation.

II. To acquaint students with nonconventional and renewable energy sources.

Credits-4

Unit-I
Introduction: Sources of energy (renewable and non-renewable) and their importance in food and agriculture sector. Energy conservation and auditing. Decentralization and integrated energy management. Scope of renewable energy and prospects. Advantages and limitations of renewable energy.

Unit-II

Unit-III
Utilization of biomass as energy source: Pyrolysis, briquetting, liquefaction, gasification. Types of biogas plants, Design of biogas plants, potential of biodiesel, its manufacturing and utilization.

Unit-IV

Suggested readings/text/references:
Semester-II
Title of the paper: Food Storage Engineering (FEM-2005)

Objective(s):
I. To acquaint with causes of spoilages of stable and perishable food commodities and their control methods.
II. To acquaint with design aspects of food crop storage structures/systems.

Credits-2

Unit-I
Storage losses in agricultural commodities. Grain Storage: levels of storage, physical properties of grain affecting storability, types of spoilage and factors of spoilage. Control of factors of grain spoilage: microorganisms, insects and pests, rodents and other vertebrates.

Unit-II
Rural storage structures for grains. Design considerations of bulk storage structures - grain pressure theories, air distribution systems and aeration fans. Design considerations of bag storage structures.

Unit-III

Unit-IV
Controlled atmosphere storage, biochemical aspect of CA storage, effects of concentrations of compositional gases on physico-chemical characteristics of Fruits and vegetables. Equipment for creating and maintaining controlled atmosphere.

Suggested readings/text/references:
4. Post Harvest- Wills, McGlasson, Graham, Lee and Hall, CBS Publishers and Distributors, New Delhi
Semester-II  
Title of the Paper: Food Preservation Technology  
Objective(s):  
I. To impart knowledge on basic principles of food preservation.  
Credits-2  
Unit- I  
Introduction to food preservation. Principles of heat preservation, high temperature preservation, evaluation of process time and time temperature combination. Nutritional losses due to thermal processing  
Principles of evaporation, types of evaporators: single 'effect and multiple effect evaporator, batch type pan evaporator, rising film falling film evaporators.  
Unit- II  
Low temperature preservation: difference among chilling, refrigeration and freezing, evaluation of freezing and thawing time, structural changes 'in foods during freezing and thawing. Methods of freezing. Intermediate moisture foods.  
Unit- III  
Unit- IV  
Dehydration of foods: basic dehydration process, dehydration systems: Tray or cabinet dryers, tunnel dryers, pulp drying, fluidized bed drying, freeze drying, changes in, food during drying.  
Suggested readings/Text/References:  
Semester-II
Title of the paper: Dairy Products Processing (FEM-2007)

Objective(s):
I. To impart knowledge of principles of processing of milk and milk products.

Credits-2

Unit-I

Unit-II
Types of market milks: full cream, standardized milk, toned, double toned milks and their production methods. Processing of fluid milk: pasteurization, sterilization, separation and homogenization.

Unit-III
Technology of milk products: cream, butter, cheese, khova, whey, yoghurt, ice-cream, condensed and dried milk.

Unit-IV

Suggested readings/text/references:
1. The Technology of Milk Processing- CP Anantakrishnan and AQ Khan and PN Padmanabhan, Shri Lakshmi Publications, Madras
2. Milk Products Preparation and Control- CP Anantakrishnan and AQ Khan and PN Padmanabhan, Shri Lakshmi Publications, Madras
3. Outline of Dairy Technology- Sukumar De, Oxford University Press
4. Dairy Plant Engineering and Management- Tufail Ahmad, Kitab Mahal, Allahabad
Title of the paper: Food Quality, Standards and Regulations (FEM-2008)

Objective(s):

I. To acquaint with principle and procedure of different techniques used in quality evaluation.
II. To impart knowledge of food regulations and standards.

Credits-4

Unit-II
Examination of canned food products, FAO/WHO Codex Alimentarius Commission standard of canned pine apple, particulars of specifications, essential composition, allowances and defects, standards and analysis of water.

Unit-III
Sensory evaluation- methods, Difference, Rating Sensitivity tests, and interpretation of results, requirements for sensory evaluation e.g. Laboratory set up, Panel selection etc., measurement of colour and consistency, (CIE system, working principles of Hunter colour difference meter, Disc colorimeter, Lovibond Tintometer, Spectrophotometer), Primary and secondary texture characteristics-consistency (Bostwick and Adams consistometer), viscosity (Efflux tube viscometer, Brooke field viscometer), texture measurement, texture measuring instruments, texture profile analysis

Unit-IV
FPO regulations, FDA standards and procedure, Quality Control criteria for different foods. Microbiological examination of food products, Food adulteration and its detection, HACCP and ISO 9000-22000 in food industry. (FSSA, PFA, BIS, AGMARK).

Suggested readings/Text/References:

Semester-II
Title of the paper: Food Quality Analysis Laboratory (FEM-2071)

Objective(s):
I. To develop the skill of food quality evaluation.

Credits-2

List of experiments:
1. Determination of acidity of a given food sample.
2. Determination of moisture content of a given food sample.
3. Determination of ash content of a given food sample.
4. Determination of crude fat in a given food sample.
5. Determination of crude protein a given food sample.
6. Determination of Vitamin-C in a given food sample.
7. Determination of reducing sugar and total sugar in a given food sample.
8. Determination of chlorophyll content in a given leafy vegetable.
10. Determination of lycopene content in a given tomato or its product.
11. Determination of alcoholic acidity in refined wheat flour.
12. Determination of gluten content of given refined wheat flour.
Objective(s):
I. To impart knowledge of the objectives of food packaging and its role in food preservation during storage, transportation and distribution.
II. To acquaint student with types of food packaging materials and systems.

Credits-2

Unit-I

Introduction: Importance, definition and functions of food packaging, Packaging materials, suitability and cost factor, Glass (construction of jars and bottles, optical, thermal and mechanical properties of glass), Metal (types of base metal sheets, construction of metal cans, lacquering), Plastics- substituted different types of plastics used in food packaging,. Form-Fill-Seal packaging machines

Unit-II

Environmental factors and food stability: Effect of oxygen and light, Light Protection characteristics of packages, permeability to gases and vapours, methods of measuring permeability, permeability to fixed gases, permeability to humidified gases, flow through pin holes, cracks and imperfect seals, permeability of multilayer materials.

Unit-III

Packaging tests: tensile strength, compression, bursting, tear and impact test for packages, integrity testing of packages, cushioning effect on packaged foods, deterioration of packaged foods, shelf life calculation for packaged foods, water activity and sorption isotherms, water activity and food stability

Unit-IV

Packaging systems: Modified Atmosphere and Controlled Atmosphere Packaging, Aseptic packaging including techniques, aseptic systems (Tetrapack, Bag-in-Box), integrity testing of aseptic packages.

Suggested readings/Text/References:
1. Hand Book of Spices and Packaging with Formulae- Eiri Board, New Delhi,
3. Food Packaging Principles and Practice- Robertson, G.L., CRC Press
Title of the Paper: Process Modeling and Simulation (FEM-3002)

Objective(s):
I. To provide the basic concepts of modeling and simulation of separation processes reacting systems and microbial destructions.

Credits-2
Unit- I

Introduction to process modeling and simulation, an overview of the modeling process. Introduction to mathematical, correlative and explanatory models, need of models and their classification.

Unit- II

Models of Heat Transfer Equipment: Development of detailed mathematical models of evaporators, use of numerical techniques for solving evaporator problems.

Unit- III

Models of Separation Processes: mathematical model of a multi-component distillation column. Models of Reactors: fixed bed reactor models, fluidized bed reactor models, bioreactor models

Unit- IV

Microbial growth dynamics models, thermal death rate kinetics of micro-organisms, thermal process time for sterilization. Linearization of systems.

Suggested readings/Text/References:
1. Process Modeling- Denn M.M., Longman
Semester-III

Title of the paper: Design and Layout of Food Processing Plants (FEM-3003)

Objective(s):

I. To acquaint with principles of establishment of food processing plants.
II. To impart knowledge of food plant design aspects.

Credits-2

Unit-I
Consideration for location of food processing plants. Plant layout- different types. Flow process charts.

Unit-II
Machine flow diagrams. Selection of processing and handling machines.

Unit-III
Plant utilities, electricity, water, steam, air, raw material requirements. Application of system design and principles.

Unit-IV

Suggested readings/Text/References:

1. Food plant design- Gomez and Canovas, CRC Press.
Semester-III
Title of the paper: Fruit and Vegetable Processing (FEM-3004)

Objective(s):
I. To acquaint with postharvest physiology of fruit and vegetables.
II. To impart knowledge of processing of fruit and vegetables.

Credits-2

Unit-I
Introduction: Status of production and processing of fruits and vegetables in India. Challenges before fruit and vegetable processing industry in India and government promotional policies. Postharvest losses in fruits and vegetables and their reasons.

Unit-II
Chemical composition and nutritional values of fruits and vegetables. Postharvest physiology of fruits and vegetables: biochemistry of respiration, respiratory responses of climacteric and nonclimacteric fruits. Physiological developments during maturation: Chemical and nutritional changes.

Unit-III
Physiological disorders: chilling injury, its mechanism and preventive measures, mineral deficiency related disorders and their preventions.

Unit-IV
Processing techniques - Thermal processing: canning and bottling, drying/dehydration, concentration/ evaporation. Freezing, methods and equipment. Fermented and unfermented fruit beverages. Quality evaluation of fruit and vegetable products. By-product utilization, economic considerations in fruit and vegetable processing.

Suggested readings/text/references:
1. Post Harvest- Wills, Mc Glasson, Graham, Lee and Hall, CBS Publishers and Distributors, New Delhi
4. Preservation of Fruits and Vegetables- Lal, Siddappaa and Tandon, Publications and Information Division, ICAR, New Delhi
Semester-III
Title of the paper: Report Writing and Seminar (FEM-3005)
Objective(s):
I. To develop technical writing and presentation skills in students.
   Credit-2
Unit-I
Technical report writing methodology-title index, list of figures, tables and graphs, statistical analysis. Presentation of results and discussion.
Unit-II
Methodology of seminar presentation. Actual presentation of project report in seminar.
Semester-III

Title of the paper: Seed Technology and Processing (FEM-3011)

Objective(s):
I. To acquaint with basic principles of seed production and processing.

Credits-4

Unit-I

Introduction to seed Technology and its importance. Seed Industry in India, development of seed programmes. General principles of seed production-agronomic and genetic principles.

Unit-II

Types of seeds-nucleus, breeders seed, foundation seed and certified seeds. Seed testing for purity, germination, viability, vigour and health.

Unit-III

Seed certification standards, regulation and legislations.

Unit-IV

Seed processing-drying, cleaning, grading, seed treatment and packaging. Handling and storage of seeds.

Suggested readings/text/references:
Title of the paper: Technology of Bakery and Confectionery Foods

Objective(s):
I. To acquaint the students with role and properties of ingredients in bakery and confectionery foods.
II. To impart knowledge on different techniques used in processing and preservation of bakery and confectionery foods.

Credits-4

Unit-I
Status of bakery food in India. Technology of bread production. Different methods of bread manufacture, Quality control tests, gluten test, alcoholic acidity, dough raising capacity etc. Bread making, equipment and machine used in different unit operations, Cookies & biscuits manufacturing technology, biscuit shaping/ cutting machine, raw materials bulk and others, Role of baking ingredients, quality control of bread biscuits production.

Unit-II

Unit-III
Losses in baking, packaging of baked products, Bakery sanitation & hygiene.

Unit-IV
Sugar confectionary, various types of sugar used in confectionary, typical confectionary products like fondants, lozenges and drops, toffees, caramels and fudges, Jams, jellies and marmalades, Cocoa processing, cocoa powder and cocoa butter, Chocolate confectionary production technology.

Suggested readings/Text/References:
2. Bread making : Improving Quality- Stanley P Cauvain, CRC Press
Semester-III

Title of the Paper: Bio-Process Engineering (FEM-3013)

Objectives:
I. To provide the basic concepts of bioprocess engineering.

Credits-4

Unit – I

Unit – II

Sterilization and Sanitation: Mechanism of micro-organism destruction, sterilisation of equipment and media, yield and product recovery; plant and environmental sanitation.

Unit – III

Product recovery operations: Handling of materials in microbial systems, precipitation filtration, centrifugation, sedimentation, liquid-liquid extraction, chromatography, membrane separation (UF and NF) drying and crystallization, separation and disintegration of cells for product recovery operations.

Unit – IV

Fermentor and bioreactors: Transport phenomenon in microbial systems, types of reactor, working principles, aeration and agitation, design and analysis of biological fermentor and bioreactors; advances in continuous fermentation.

Suggested readings/Text/References:
2. Biochemical Engineering Fundamentals- Bailley and Ollis, McGraw-Hill
3. Advances in biochemical Engineering. Schimid,
Title of the paper: Emerging Technologies in Food Processing (FEM-3014)

Objective(s):
I. To acquaint students with the scope of emerging food processing technologies and their limitations.

Credits-4

Unit-I
Osmotic dehydration, hurdle technology, applications of probiotics, high pressure processing technology, ultra sonic treatment/nano-thermo-sonication technology.

Unit-II
Extrusion cooking technology, irradiation and ultra violet ray treatment technology, cryogenic grinding/cryo-freezing/crusto-freezing.

Unit-III
Technology of membrane processing, ultra filtration technology, Super-critical fluid extraction technology, food fortification technology.

Unit-IV
Pulsed electric field processing technology, radio-frequency heating technology, enzymes technology, fermentation technology, magnetic resonance imaging, non-destructive quality assurance techniques

Suggested readings/Text/References:

1. Da-Wen Sun, Emerging Technologies for Food Processing.
2. Nonthermal Processing Technologies for Food- Zhang, Barbosa-Cánovas, Dunne, Balasubramaniam, Farkas, Yuan (editors), John Wiley & Sons
3. Innovative Food Processing Technologies: Advances in Multiphysics Simulation- Knoerzer, Juliano, Roupas, Versteeg (editors), John Wiley & Sons
4. Review papers on various aspects of emerging food technologies.
Semester-III
Title of the paper: Food Processing and Preservation Laboratory (FEM-3071)
Objective(s):
I. To learn by doing the processing and preservation techniques of major food products.
Credits-2
List of experiments:
1. Preparation of mixed fruit jam.
2. Preparation of guava jelly.
3. Preparation of tomato ketchup.
4. Preparation of apple preserve.
5. Preparation of mixed vegetable pickle.
6. Preparation of lime pickle.
7. Preparation of chilli sauce.
8. Preparation of lime-ginger squash.
Semester-IV
Title of the Paper: Industrial Economics and Management (FEM-4001)
Objective(s):
I. To impart knowledge on basic economic aspects of industries.
II. To impart knowledge on aspects of management of enterprises.
III. To develop entrepreneurial skills in students.
Credits-2
Unit- I
Definition, nature and scope of industrial economics, tools of economic analysis. Demand analysis, forecasting and decision making.
Unit- II
Cost and profit-concepts, cost-revenue and cost control, profit accounting and balance sheets.
Unit- III
Break even analysis. Feasibility analysis and report. Marketing and pricing policies.
Unit- IV
Industrial organizations and management-concepts, characteristics, principles, effective management and scientific management, system’s approach, Production planning, Materials management
Suggested readings/Text/References:
1. Business Economics, Excel Books.2- Adhikari
Semester-IV
Title of the paper: Project Engineering and Management (FEM-4011)

Objective(s):
I. To impart knowledge on aspects related planning and execution of engineering projects.

Credits-4

Unit-I
Introduction and responsibilities of a project engineer. Scheduling the project: The schedule sheet, information for schedule preparation, scheduling department/procurement operations: Organization and operation of a procurement department, procurement procedures, inspection, expediting etc.

Unit-II
Contracts and contractors: Engineering and construction firms, basis of a contract, types of reimbursement, the contract form.

Unit-III

Unit-IV
Cost Model: Project cost, direct project cost, slope of direct cost curve, etc. Crashing, updating, resource allocation. Resource smoothening and leveling.

Suggested readings/text/references:
1. Project Engineering & management- S. Moulik, Author house.
4. Engineering Project management-N.J. Smith, Wiley and Sons
Semester-IV
Title of the paper: Medicinal and Herbal Products Processing (FEM-4012)

Objectives:
I. To acquaint students with therapeutic properties of major Indian spices and herbs.
II. To impart knowledge on fundamental techniques of preservation, processing and application.

Credits-4

Unit-I
Introduction: Historical background, availability, utilization, harvest and post harvest management of medicinal crops. Nutritional and medicinal values of selected food products, especially fruits and vegetables.

Unit-II
Therapeutic uses of herbs and medicinal plants and their efficacy. Assay of components of therapeutic and medicinal importance. Extraction, separation and purification techniques of active constituents from herbs/plants.

Unit-III
Unit operations in processing of herbs/medicinal plants: drying/dehydration, crushing, grinding, packaging, etc. Effect of processing on medicinal properties of herbs/medicinal plant products.

Unit-IV
Product formulations as nutraceuticals, fortified food products and other forms. Marketing of herbal formulations.

Suggested readings/text/references:
1. Hand Book on Herbal Medicines- H Panda, National Institute of Industrial Research
3. Technology Of Herbal Cosmetics and Toiletries Products with Formulae- Engineers India Research Institute
Semester-IV

Title of the paper: Industrial Fermentation (FEM-4013)

Objective(s):
I. To acquaint with principle and techniques of fermentation and its application to processing and preservation of all types of food.

Credits-4

Unit-I
Introduction and definition of fermentation and terms related to fermentation, nutritional value of fermented food, requirement’s of fermentation, various substrate used in fermentation different types of fomenters

Unit-II
Traditional fermented foods: Sauerkraut, oriental fermented foods like soy sauce, miso, tempeh, sofu etc, dairy fermented products, cultured milk, yoghurt, cheese production,

Unit-III
Production technology of baker’s yeast, citric acid production, uses of citric acid in food and other industries, Antibiotics production and Vinegar production,

Unit-IV
Alcoholic fermentation, Importance, sources, cultivation, purification, separation and isolation of microbial enzyme, conversion to storage form and immobilization of enzymes, industrial application of enzymes.

Suggested readings/Text/References:

1. Industrial microbiology- Prescott & Dunns, Agrobios (India)
Semester-IV

Title of the paper: Biochemical Engineering and Enzyme Technology (FEM-4014)

Objective(s):
I. To acquaint with principle of different techniques used in processing and preservation of food.

Credits-4

Unit-I
Introduction (evolution and role of bio-chemical engineering), chemical thermodynamics, conditions for spontaneity of reaction, kinetics of bio-chemical reactions, industrial microbiology, enzyme catalyze reactions batch and continuous system,

Unit-II
Calculation of thermal effects and adequacy of treatments, fermentation and downstream processing, Bio-chemical changes caused due to microorganism. Bioreactors (pulse, fluidized, photo bioreactors etc.), Measurement and control of bioprocess parameters, product recovery. Removal of microbial cells and solid matter, foam separation, precipitation, filtration,

Unit-III
centrifugation, cell disruptions, liquid-liquid extraction, chromatography, membrane process, drying and crystallization, effluent treatment: DOC and COD treatment and disposal of effluents. Enzyme and whole cell immobilization and their industrial application.

Unit-IV
Single cell protein, Large scale enzyme production from microbial cell, Amino acid production, Vitamin production.

Suggested readings/Text/References:

1. Industrial Microbiology- Prescott & Dunns, Agrobios (India)
Semester-IV  
**Title of the paper:** Environment Control Engineering (FEM-4015)  
**Objective(s):**
I. To make students aware of types of environmental pollution and their impact on environment.  
II. To acquaint students with contribution of food processing sector in environment pollution.  
III. To impart knowledge of measurement and control of environment pollution.  
**Credits-4**

**Unit-I**

**Unit-II**

Pollution due to biomass. Pollution due to agro/food processing industries: dairy, meat, fruit and vegetable, food grain processing industries and their impact on environment and human life.  

**Unit-III**

**Unit-IV**

Environment Protection Act and policies. Role of Pollution Control Boards/Agencies in monitoring and enforcing Act and policies.  

**Suggested readings/text/references:**
1. Environmental Pollution Control Engineering - C.S. Rao, New age International Pvt. Ltd.
2. Waste Treatment in the Food Processing Industry - Wang, Hung, Lo and Yapijakis (editors), Taylor and Francis Group.
3. Food Processing Waste Management: Treatment and Utilization Technology - V.K. Joshi, New India Publishing Agency
Semester-IV
Title of the paper: Rural Industrial Planning and Management (FEM-4016)
Objectives:
To acquaint with entrepreneurship, planning and management of rural agro-industry.
Credits-4

Unit-I
Industrialization and industrial planning. Rural Development issues. Role of science and tech. Farm — nonfarm sectors. Farming systems and their role in rural development.

Unit-II
Problems and prospects of industries in rural areas. Role of agro/food processing in rural development.

Unit-III

Unit-IV
Techniques for improving productivity. GMP and TQM. Selected Agro/Food Processing Techniques Suitable for Rural Development and their details. Role of CAPART and MRD and NGOs.

Suggested readings/text/references:
Semester-IV
Title of the paper: Food Extrusion Technology (FEM-4017)

Objectives:

I. To acquaint with design aspects of food extruders.
II. To acquaint with influence of process and feed characteristics on product quality and application of extrusion technology in human foods and animal feeds

Credits-4

Unit-I

Unit-II
Basics of extruder design: rheology of feeds, modeling of feed flow in extruder, isothermal Newtonian flow, corrected flow equation, leakage flow, isothermal non-Newtonian, modeling of input power. Design of die: die characteristics, end effects.

Unit-III
Composition and physical requirements of extruder feeds. Preconditioning of extruder feeds: benefits, types of preconditioners (atmospheric and pressurized, single/double shaft, DDDS). Effects of extruder parameters and feed composition on characteristics of extruded products: gelatinization of starch feeds, denaturation of protein feeds.

Unit-IV
Changes caused by extrusion: Structural changes-expansion, texturization, etc and nutritional changes in carbohydrates, proteins, lipids, vitamins, minerals, anti-nutritional factors. Application of extrusion technology in foods and animal feeds.

Suggested readings/text/references:
3. Extrusion Science and Technology- Kokini, Josef and Karve (eds),, Marcel Dekker, USA.
Semester-IV

Title of the paper: Project Work and Dissertation  
(FEM-4071)

Objectives:

I. To develop research and project writing skills in students.

Credits-12
A research project will be allotted to each student after the III semester. They will be required to complete the data collection, analysis and writing of dissertation so as to submit it at the end of IV Semester and to present it at seminar.
