ARCHITECTURE GRAPHICS-II

PRESENTATION DRAWING

SUBMITTED BY: GULSHAMA PARVEEN

ROLL NO. 18DPIA366

ENROLL NO. GK9046
Ans1. Presentation drawings are the drawings that are used to convey basic design concepts from the design team to the owner. In residential architecture, presentation drawing are frequently used to show compliance with review board standards and to help advertise existing stock plans.

ANS:2. The difference between the presentation drawing and working drawing is that the owner, the user or general public may not be able to understand the working drawings fully, each can be drawn as a presentation drawing to show basic information. The presentation drawing gives the viewer an accurate idea of the finished product whereas the working drawing is aimed at
giving the construction crew information about the materials that they will be installing.

ANS:3. An architectural illustrator creates all the presentation drawings. An illustrator combines the skills of an artist with the techniques of drafting.

ANS:4. The major information found on each type of presentation plans are;

   a. RENDERING: It presents an image of how the structure will appear when the structure is complete. It can also refer to a drawing created using the perspective layout, method.

   b. ELEVATION: A presentation elevation helps to show the shape of the
structure without taking much time as a rendering.

**c. FLOOR PLANS:** A presentation floor plan is used to show room relationship, openings such as window and doors and basic room sizes. Furniture and traffic patterns are also usually shown.

**d. SITE PLAN:** A rendered site plan is used to show how structure relate to the job sites.

**e. SECTIONS:** Presentation sections are used to show verticle relationships.

**ANS:5.** Rendering is the best type of drawing which is used to show the shape and style of structure.
ANS: 6. The four media that are often used for presentation drawing are:
   a. Sketch paper
   b. Mylar
   c. Illustration method
   d. CADD

ANS: 7. The drawing material which is often used for presentation are:
   a. Graphite
   b. Ink
   c. Colour pencil
   d. Felt-tip pens
   e. Water color
   f. Cadd-generated drawings.

Ans: 8. The methods which are commonly used to a drawing are colored pencils, markers or pastels. The skills of the drafter
and the purpose of the drawing will effect where the color is to be placed.

**ANS:9.** Sections are usually drawn at a scale similar to presentation floor plans.

**ANS:10.** The scale which is typically used when a floor will be reproduced photographically is either \( \frac{1}{4}'' = 1'-0'' \) or \( \frac{1}{8}'' = 1'-0'' \).
