Presentation Drawing

1. What is the use of Presentation drawing?

Presentation drawing are the drawings that are used to convey basic patterns, design concepts from the design team to owner or other interested persons. Presentation drawing are very important part of public hearings and design reviews as a structure is studied by government and private agencies to determine its impact on the community.

2. What is the major difference between the information provided on a presentation drawing and that provided on a working drawing?

Ans. Working drawing: May include tones or hatch to emphasize different materials, but they are diagrams not intended to appear realistic. But the owner, user or general public may not to be able to understand the working drawing, to show basic information a presentation drawing is required. Presentation drawing typically include people, vehicles and trees, rendering, elevation, floor plans, site and...
section plan. It is simple to understand than the working drawing to the general public.

Qnest. What are the some factors that might influence who will draw the presentation drawings?

Ans. Some factors that might influence who will draw the presentation drawings are:

i) Renderings
ii) Elevations
iii) Floor plans
iv) Site plans
v) Section

i) Rendering: Rendering are the best type of presentation drawing for showing the shape or style of a structure.

ii) Elevation: A rendered elevation is often used as a presentation drawing to help show the shape of the structure.

iii) Floor plans: Floor plans are often used as presentation drawings to convey the layout of interior space, similar to the preliminary floor plans in the design process.
iv. Site plan: A rendered site plan is used to show the structures will relate to the job site and to the surrounding area.

Extension: Sections are often part of the presentation drawing to show vertical relationship within the structure.

Question: What type of drawing is best used to show the shape and style of a structure?

Answer: Renderings are the best type of presentation drawing for showing the shape or style of a structure. The term rendering can also be used to describe an artistic process applied to a drawing.
Quest List your media that are often used for presentation drawing?

One common media for presentation drawing include:

i. Sketch paper.
ii. Vellum.
iii. Illustration board.
iv. CADP.

ii. Sketch paper:—It is often used for the initial largest stages of presentation drawing.

ii. Vellum:—Vellum is also used for largest and it is durable than the sketch paper.

iii. Illustration board:—It is extremely durable and is suitable surface for all type of drawing materials.

iv. CADP:—A pleasing effect can be achieved by combining media.

Question Which drawing material is most often used for presentation drawing?

The common materials used for presentation drawing are graphite ink, colored pencil, felt tip pens, watercolours and CADP generated drawings.

Because of ease of correcting errors, graphite is a good material for the
