ARCHITECTURE GRAPHICS-II

PRESENTATION DRAWING

MOHD JUNAID

17DPIA 313

GI0144
Presentation drawings are the drawings that are used to convey basic design concepts from the design team to the owner or other interested persons. In residential architecture, presentation drawings are frequently used to show compliance with review board standards and to help advertise existing stock plans.
Ans: 2. The major difference is that presentation drawing gives the viewer an accurate idea of the finished product, whereas the working drawing is aimed at giving the construction crew information about the materials that they will be installing.

Ans: 3. An architectural illustrator creates all presentation drawings. An illustrator combines the skills of an artist with the techniques of drafting.

Ans: 4. The major information found on each type of presentation plans are:
   a. **Renderings**: It presents an image of how the structure will appear when the structure is complete. It can also refer to a drawing created using the perspective layout method.
   b. **Elevations**: A presentation elevation helps to show the shape of the structure without taking much time as a rendering.
   c. **Floor plans**: A presentation floor plan is used to show room relationships, openings such as windows and doors, and basic room sizes. Furniture and traffic patterns are also usually shown.
   d. **Site plans**: A rendered site plan is used to show how structure relate to the job sites.
   e. **Sections**: Presentation sections are used to show vertical relationships.

Ans: 5. The type of drawing which is best used to show the shape and style of a structure is rendering.

Ans: 6. The four media that are often used for presentation drawing are: a. Sketch paper  
   b. Mylar  
   c. Illustration board  
   d. CADD

Ans: 7. The drawing material which is most often used for presentation drawings are: a. Graphite  
   b. Ink  
   c. Colored pencil  
   d. Felt-tip pens  
   e. Watercolor  
   f. Cadd-generated drawings.

Ans: 8. The methods which are commonly used to add color to a drawings are colored pencils, markers or pastels. The skill of the drafter and the purpose of the drawing will effect where the color is to be placed.

Ans: 9. Sections are usually drawn at a scale similar to the presentation floor plan.
Ans: 10. The scale which is typically used when a floor plan will be reproduced photographically is either 1/4" = 1'-0" or 1/8" = 1'-0".
