Dear Colleagues,

It gives me immense pleasure to inform you that the Department of Tahaffuzi wa Samaji Tib (Preventive and Social Medicine), Faculty of Unani Medicine, A.M.U, Aligarh is organizing One Day workshop on “Hepatitis - B” on 30th October, 2013 on the occasion of completion of 3rd & final round of Free vaccination Campaign (on 28th-29th October, 2013) against Hepatitis B. The campaign was started on the occasion of World Immunization Week (22nd – 27th April, 2013).

Hepatitis B is a potentially life-threatening liver infection caused by the hepatitis B virus. It is a major global health problem. It can cause chronic liver disease and chronic infection and puts people at high risk of death from cirrhosis of the liver and primary liver cancer.

More than 350 million people have chronic (long-term) liver infections. About 6 lakh people die every year due to the acute or chronic consequences of hepatitis B.

In the Middle East and the Indian subcontinent, an estimated 2–5% of the general population is chronically infected while less than 1% of the population in Western Europe and North America.

In highly endemic areas, HBV is most commonly spread from mother to child at birth, or from person to person in early childhood. Children less than 6 years of age who become infected with the hepatitis B virus are the most likely to develop chronic infections.

There is no specific treatment for acute hepatitis B.

The hepatitis B vaccine (95% efficacy) is the mainstay of hepatitis B prevention, WHO recommends that all infants receive the hepatitis B vaccine as soon as possible after birth, preferably within 24 hours.

This workshop is a step towards awareness towards prevention against Hepatitis B thorough vaccination.

“An ounce of prevention is worth a pound of cure”

Yours sincerely
