TECHNICAL SPECIFICATIONS OF STEREOTACTIC FRAME

1] HEAD RING ASSEMBLY (VUHR):
A compact design provided with artifact free, adjustable Fiber posts and accommodates any type of human skull up to maximum size 200 mm in diameter. This is kept fixed on the skull through the operation. The head ring is provided space for oxygen mask.

2] LOCALIZER FRAME (VULF):
Designed to suit any make of body CT and MRI Scanner.

3] MANUAL METHOD:
All scans must be orthogonal (Parallel or Perpendicular) to the localizer. After the patient is scanned, calculate the positions of the targets (i.e. A-P, LATERAL & VERTICAL) using the scanner and simple geometry All manual calculations are based on two steps. • Find the origin of the localizer’s space. • Measure the distance to the target from that Inter section of lines.

4] “UNISKUL”SOFTWARE METHOD:
Uniskul can be installed on any personal computer with MS DOS/ Windows Operating System. Computes the target position in the brain in terms of ANTERIOR-POSTERIOR, LATERAL & VERTICAL. However, accurate analogy depends on the SKILL derived by the CT scan / MRI Scan operator in picking the data from selectable slice.

5] PHANTOM BASE ASSEMBLY (VUPB):
Simulates the nucleus of the target position in the brain and as well as the approach point on the skull. Provides the surgeon with safe check before conducting the surgery.

The CT & MRI scan locates the point of pathology in the two dimensional co-ordinate system. The data is recorded on to the Data Sheet Manual Method Calculation and Datasheet for 'UNISKUL' software gives the detailed orientation of the point of Pathology. The calculated target points i.e. AP, Lateral and Vertical (X, Y, Z) are confirmed on a simulator PHANTOM BASE prior to surgery. The same target values i.e. AP, Lateral and Vertical to be set on the ARC ORIENTOR FRAME and confirmed the line of approach to the simulated target (i.e. Point of the Pathology) on the PHANTOM BASE. After confirmation of the trajectory (LINE OF APPROACH) the ARC ORIENTOR enables the surgeon to approach the target from any angle without obstruction with an overall accuracy of less than 0.3 mm. However, the accuracy is greatly affected by the correctness of the scan data collected from the topograph. Among currently active operations of this device are tumour biopsies; reaching the deep seated Brain Tumors in pinneal, thalamus and brain stream region, haematoma evacuation, abscess drainage and colloid cysts aspirations etc.

Should have Biopsy needles with Stereotactic frame.
